Core Services

PAVIR's Core Services, also known as Specialized Service Centers (SSC) are set up to provide a flexible mechanism to cost allocate expenses associated with the provision of standard services necessary in the performance of research, and to prevent needless duplication of scientific resources within our research community. As a guiding principle, Cores, or SSCs, are created to benefit the researchers of the institution(s) whose resources are used to house and administer the SSC, but researchers from other institutions may also access and benefit from these SSCs. A different pricing structure for outside users may apply.

Laser Scanning Microscopy Core

Flow Cytometry Core
